

Solve the following systems using substitution.

11.  $y = 2x$   
 $y = x + 5$

$$\begin{aligned} 2x &= x + 5 \\ -x &\quad -x \\ \boxed{x = 5} &\text{ is the point} \\ y &= 2(5) \quad (5, 10), \\ \boxed{y = 10} & \end{aligned}$$

The solution to the system

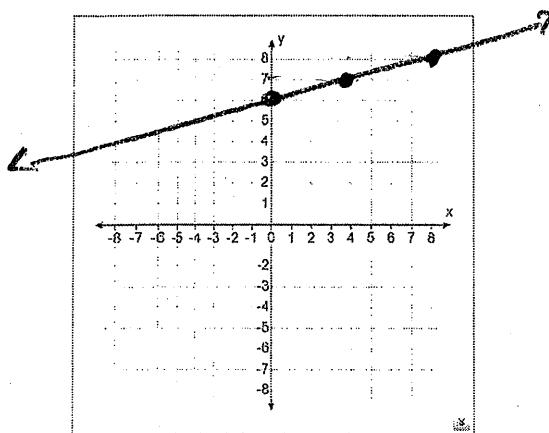

12.  $x + y = 5$   
 $y = x - 4$

$$\begin{aligned} y &= 4.5 - 4 \\ &\boxed{y = 0.5} \end{aligned}$$

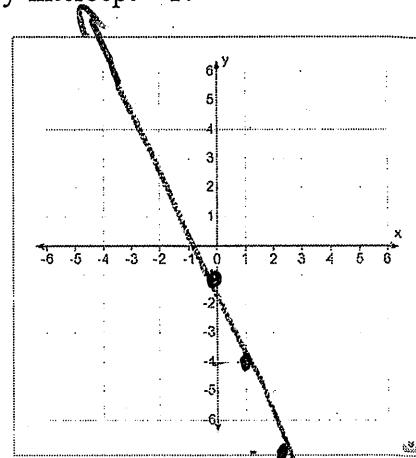

$$\begin{aligned} x + (x - 4) &= 5 \\ 2x - 4 &= 5 \\ +4 &\quad +4 \\ 2x &= 9 \\ \boxed{x = 4.5} & \end{aligned}$$

The solution to the system is the point  $(4.5, 0.5)$ .

13. Graph the line with the slope  $\frac{1}{4}$  and y-intercept 6.

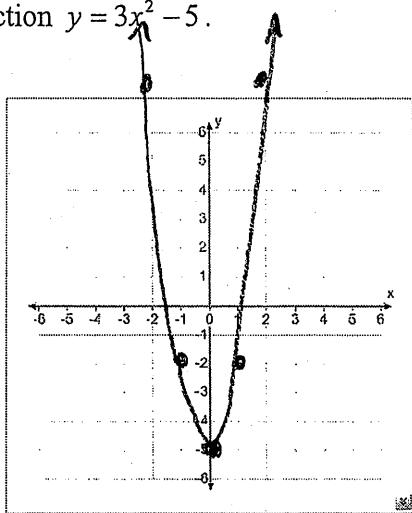

14. Graph the line with the slope  $-3$  and y-intercept  $-1$ .

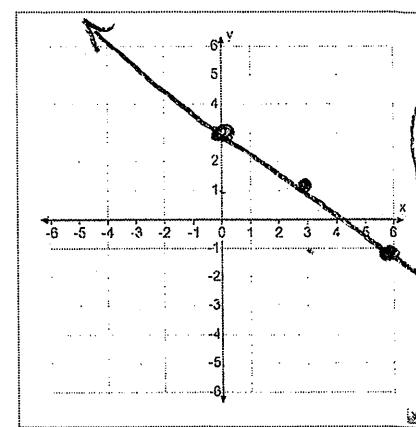

15. Complete the table, then graph the function  $y = 3x^2 - 5$ .

x	y
-2	7
-1	-2
0	-5
1	-2
2	7

16. Write the equation  $2x + 3y = 9$  in slope-intercept form and graph.

$$3y = 9 - 2x$$

$$y = -\frac{2}{3}x + 3$$

$$\boxed{y = -\frac{2}{3}x + 3}$$
